NESTLE WOODEN TRIPODS TW 246-9 | TW 246-6

HEAVY VERSION WITH SELF-LOCKING MECHANISM

13724001
13725001

Our heavy wooden tripods are made of highest quality wood.
A special oil treatment prevents water penetration and the resulting swelling of the wood.
Wooden tripods have better damping properties than aluminium tripods, so that vibrations can be very well absorbed.
In addition, the material expands less under direct sunlight.
Handling the wooden tripods is just as convenient as with the aluminium tripods.
The self-locking mechanism secures the tripod legs during carrying and transport and prevents accidental unfolding, thus effectively avoiding transport damage and injuries.

YOUR ADVANTAGES IN APPLICATION

High-precision measurements with theodolites, total stations and robotic stations.
Special wood treatment prevents water ingress.
Very good damping properties.

Technical data	13724001	13725001
working range at 1 m tip distance	93 to 170 cm	90 to 170 cm
Transport dimension	108 cm	108 cm
Connection	5/8''	5/8
Clamping	Clamping screw	Clamping screw
Colour of wooden elements	yellow	yellow
Fitting colour	black	black
Head plate	flat, metal, triangular	flat, metal, round
Weight	6.200 g	6.200 g
